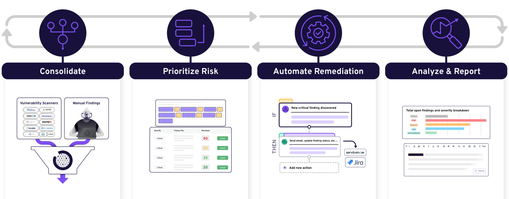
Evolve Into CTEM With PlexTrac

Adopt a dynamic and continuous approach to security with PlexTrac for CTEM by consolidating data, prioritizing risks based on business impact, streamlining remediation workflows, reducing risk, and advancing cybersecurity maturity.



Automate the CTEM Lifecycle With PlexTrac

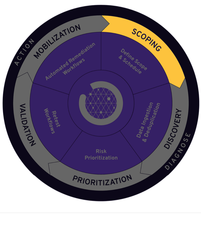
SCOPING | DISCOVERY | PRIORITIZATION | VALIDATION | MOBILIZATION

What is Scoping

Scoping sets the foundation for your CTEM program by defining which assets should be evaluated for threat exposure and how they should be prioritized based on the company's business objectives and potential risk impact.

How PlexTrac helps

Establish clear asset ownership and manage all assets within PlexTrac for comprehensive attack surface visibility. Use this centralized view to collaborate across teams and define the testing scope based on business priorities and risk. Once the scope is established, leverage PlexTrac's scheduling feature enables engagement management to support a continuous cadence of continuous testing



PlexTrac Benefits

- Full Attack Surface Visibility
- Prioritize Risk
- Speed Mobilization
- Actionable Insights

One platform to manage assets for full attack surface visibility

Maintain full attack surface visibility and continuously monitor assets to identify findings through a wide range of integrated discovery tools and manual testing efforts.
